SUSTAINABILITY

AT SCHÄFER + PETERS

Welcome to Schäfer + Peters

Schäfer + Peters is your partner for stainless steel and anti-corrosion fasteners, DIN and standard parts such as wood screws, metric screws, tapping screws, washers, nuts and also products such as heavy-duty fastenings, safety screws and solar fastenings as well as special and drawing parts. All items are available in various versions.

A corrosion resistant and sustainable connection to our customers is at the heart of everything we do. With over 37,000 items in stock, more than 300 dedicated employees, and modern quality management, we ensure reliability and quality every day.

Sustainability at S+P

As a family-owned company, environmental protection and sustainability are very important to us.

Measures have already been implemented in individual projects and areas in the past. In order to further improve our company in the following sustainability areas in the future, we established a sustainability team in 2023.

The core areas of our sustainable activities

**Environment
& Resources**

Employees

**Social
responsibility**

**Products &
Processes**

Environment & Resources

We successfully conducted an energy audit in accordance with DIN EN 16427-1 back in 2015. With the subsequent introduction of an energy management system in accordance with ISO 50001 and an environmental management system in accordance with ISO 14001, we have taken another step towards systematically documented and sustainable corporate management.

Energy

Since 2010: Photovoltaic system with own electricity consumption

Since 2021: Green electricity consumption

2024/2025: Conversion of lighting to LED

Packaging

Use of Euro pallets

Reuse of cardboard boxes for shipping

Filling material with more than 90% recycling content

Recycling

Stainless steel is 100% recyclable

Waste separation

Proper disposal

Employees

The well-being of our employees is our top priority. Our values create a special TeamS+Pirit that is lived both during work and after hours. We attach great importance to cohesion and mutual appreciation.

Special payments

Kindergarten subsidy

Company pension scheme

Supplementary health insurance

Wellpass

Job bike

Company parties

Training at S+P

Since 1992, we have been offering several trainees the opportunity to start their professional careers with us every year. We are proud that many of our trainees have now become long-standing employees. We offer all employees the opportunity to continue their education according to their ideas and wishes at any time.

Products & Processes

In terms of recyclability and service life, stainless steel is a very sustainable material. Generally, our products consists of more than 90 percent recycled stainless steel. Although its production and processing require a lot of energy, stainless steel can therefore clearly be described as environmentally friendly. After all, stainless steel products are utility items that, in the best case scenario, can be used for a lifetime.

Suppliers

Our long-standing, trusting relationships with our suppliers are based on reliability and a shared commitment to social responsibility. Carefully selecting our suppliers is a top priority for us. Through regular visits to suppliers at their production sites, we monitor not only quality but also working conditions and ensure that human rights are respected. Through our Code of Conduct, we require our suppliers to strictly adhere to internationally recognized human rights as well as legal and international environmental protection standards.

Social responsibility

As a company, we are particularly committed to social responsibility and actively supporting our region. That is why we specifically sponsor local associations, schools and workshops for people with disabilities.

An integral part of our commitment is also the regular provision of donations for raffle campaigns, which are used to support charitable events and finance important projects. In this way, we want to contribute to ensuring that local social initiatives receive the recognition and support they deserve.

The S+P Soccer Cage Cup

As a company, we not only take on economic responsibilities, but also consciously bear responsibility toward society—especially toward young people and our local community. The Soccer Cage Cup is more than just a sporting event: it is an instrument of social responsibility that helps us convey sustainable values and create real added value.

Promoting youth and talent

The cup offers young people from the region a platform to showcase their soccer skills, compete athletically, and strengthen important social skills such as fairness, team spirit, and respect.

Inclusion

Everyone is welcome, regardless of their background, skill level, or club affiliation. The event brings people together, breaks down barriers, and creates opportunities for young people, families, and friends to meet.

Strengthening the local community

With a supporting program, opportunities to meet new people, and joint activities, the Soccer Cage Cup promotes positive interaction—not only on the pitch.

Health, exercise, and joie de vivre

Sport provides space for exercise, strengthens physical and mental health, and ensures joy and balance—especially for young people. With the Soccer Cage Cup, we want to actively combat lack of exercise and loneliness.

Sustainable use of resources

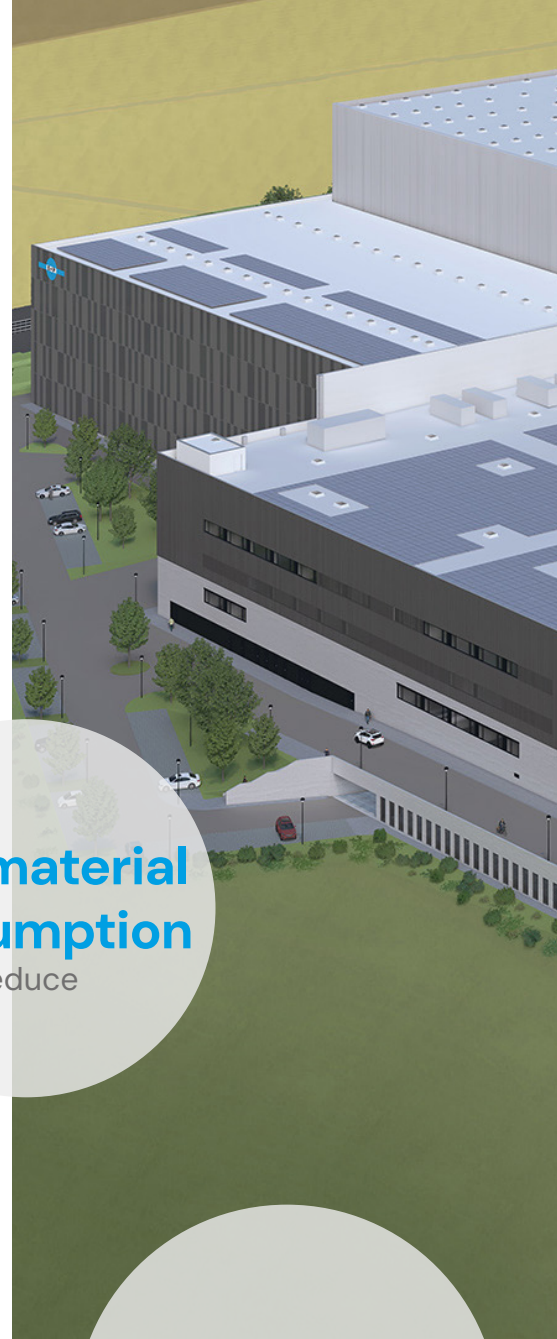

Even though the focus is on sport, we make sure that the event is environmentally friendly: waste prevention, conscious use of energy and resources, and local sourcing of supplies and equipment are all part of our commitment.

Goals & Future

Our goal is to take responsibility for current and future generations. This involves not only reducing environmental impact, but also balancing social justice and economic stability. The future of sustainability means promoting innovative solutions, optimizing processes, and building long-term sustainable structures.

With clearly defined goals and a holistic approach, we want to make an active contribution to a more sustainable world – ecologically, economically, and socially.

Energy consumption
reduce

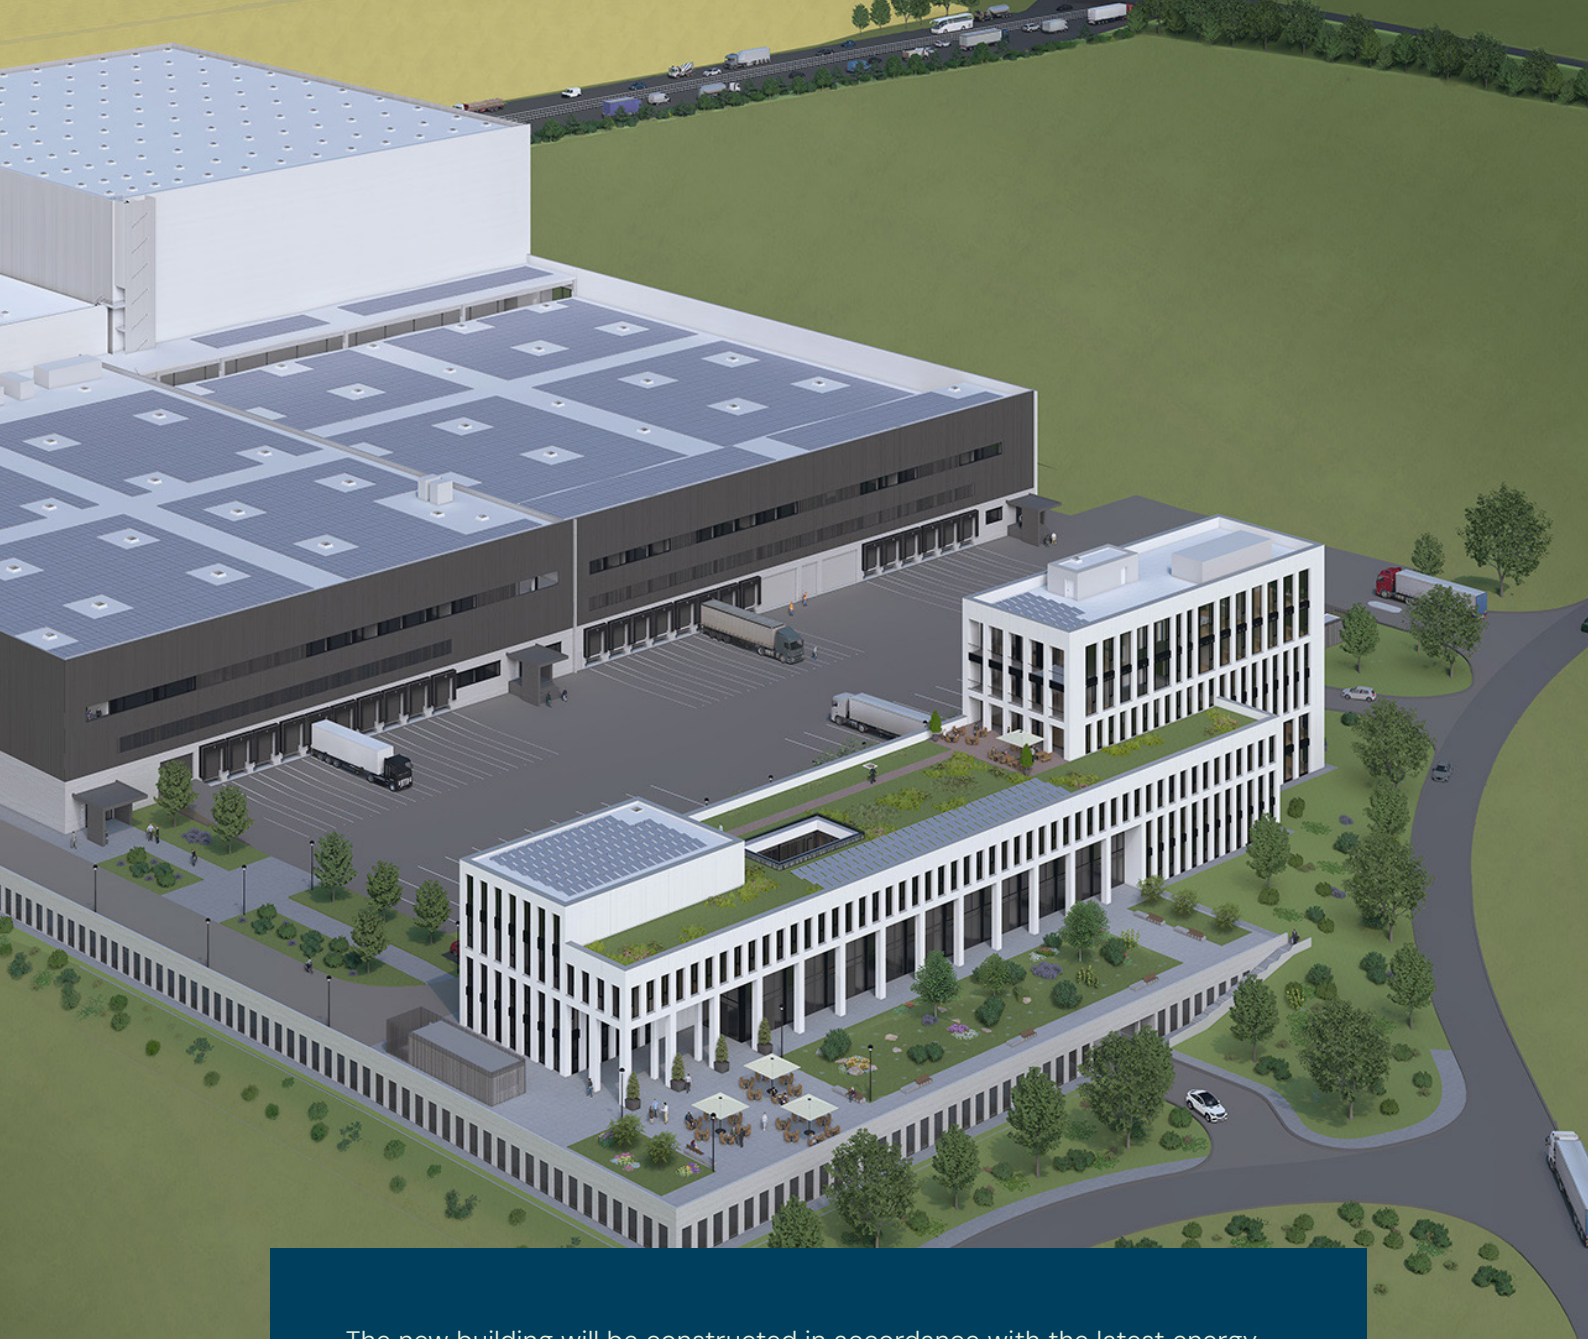

Raw material consumption
reduce

Recycling rate
increase

Paper consumption
reduce through digitalisation

CO₂ neutrality
until 2045

Waste
reduce

The new building will be constructed in accordance with the latest energy standards. The plan includes:

1. Photovoltaic systems for self-sufficient power supply
2. Modern heat pump technology
3. Energy-efficient building technology (ventilation, lighting, insulation)
4. Sustainable construction with a focus on durability and CO₂ reduction

New building in Neuenstein

With the relocation from Öhringen to Neuenstein, a new, modern, and energy-efficient logistics and administration building will be constructed by mid-2028. The new location is a reflection of our growth and, at the same time, an important step toward greater sus-

tainability, efficiency, and customer proximity. Environmentally friendly building technology, resource-saving materials, and innovative logistics processes will reduce our ecological footprint in the long term.
